

The Post-graduate Program in Immunology, of the Institute of Biomedical Sciences, is pleased to invite all from our department to the seminar:

Mechanisms for tumor repopulation as targets for therapeutic strategies

Roger Chammas

BS in Medicine (1988), and PhD in Biochemistry (1993) from USP and Ludwig Cancer Research. RC was postdoc in USP, UNIFESP and UC System. He was visiting researcher at Unifesp, Moffitt Cancer Reserch Center (USA, 2012) and at UC Davis (2019). Currently, he coordinates the Center for Translational Research in Oncology (ICESP), he is faculty at University of North Carolina (USA), and full professor at USP Medical School. His research focuses on cancer progression, progression markers carbohydrate-dependet, tumor microenvironment characterization for combined therapies, and molecular diagnosis by image.

Venue: Anfiteatro Ivan da Mota e Albuquerque (ROSA)
Edifício Biomédicas IV
Av. Prof. Lineu Prestes, 1730 -
Cidade Universitária.

Organizers:

Theresa Ramalho
Gustavo P. Amarante-Mendes
