

The Post-graduate Program in Immunology, of the Institute of Biomedical Sciences, is pleased to invite all from our department to the seminar:

Dengue virus-mediated antibody-secreting cell differentiation is associated with the activation of the tryptophan metabolism

Eduardo L. V. Silveira

B.S. in Biological Sciences (2001) from Unesp; masters in Basic and Applied Immunology (2005) from FMRP/USP; PhD in Microbiology and Immunology from Unifesp (2015) supervised by Prof. Mauricio M. Rodrigues. Postdoc in the New York University / Rockefeller University (2010) and Emory University (2015). Currently, ES is professor in FCF/USP since 2015, and his research focuses on vaccines, immune responses against viral and parasitic infections, B cells responses and production of monoclonal antibodies.

Venue: Anfiteatro Ivan da Mota e Albuquerque (ROSA)
Edifício Biomédicas IV
Av. Prof. Lineu Prestes, 1730 - Cidade Universitária.
