

SIMPLIFYING ANTIRETROVIRAL HIV THERAPY: ARE THREE DRUGS ALWAYS NECESSARY?

Alexandre Naime Barbosa

BS and PhD in Tropical Diseases from Botucatu Medical School. Currently, Dr. Alexandre is an assistant professor at Botucatu Medical School and director of the Department of Infectious Diseases, where his research aims to study variability of the HIV reverse transcriptase and protease genes has been used as indicators of drug resistance and as a mean to evaluate phylogenetic relationships among circulating virus. In addition, he occupied important positions in Brazilian Society of Infectious Diseases and the International Aids Society (IAS).

November 10th (Tuesday), 12pm

Registration and access: <https://zoom.us/j/91883329676>
