

A NEUROPROTEOMICS-CENTERED APPROACH TO UNDERSTAND THE HUMAN BRAIN

April 6th (Tuesday), 12pm

Daniel Martins-de-Souza is a biologist, with a PhD in Biochemistry. After having spent 6 years in postdoctoral training in Germany and in the UK, Dr. Martins-de-Souza is now professor no Departamento de Bioquímica e Biologia Tecidual do Instituto de Biologia (IB) da Universidade Estadual de Campinas (UNICAMP). He is currently funded by Sao Paulo Research Foundation's Young Investigator program. His group studies the molecular basis of schizophrenia and depression, focusing in postmortem brains and blood plasma samples
