

TET ENZYMES IN ADAPTIVE IMMUNITY

May 18th (Tuesday), 12pm

BS degree in Microbiology, MSc in Immunology, and Ph.D. at the Max Delbrück Center, Germany. VL is Assistant Professor the Medizinische Universität Innsbruck. VL studies the molecular control mechanisms of cell fitness and fate decisions with a major focus on immune cells and their progenitors, hematopoietic stem, and progenitor cells. The resulting mechanistic insights should aid in predicting and preventing disorders and lead to novel therapeutic strategies for therapeutic intervention.
